WHAT IS IT ABOUT RIDING A SKI-DOO THAT KEEPS YOU COMING BACK FOR MORE?

IS IT THE GOOSEBUMPS FROM THE ROAR OF THE ENGINE? THE FEELING OF YOUR HEART RACING THROUGH YOUR PARKA? THE MEMORIES MADE WITH YOUR FRIENDS? THE SMELL OF FRESH PINE AND GASOLINE? IT'S ALL THAT AND MORE.

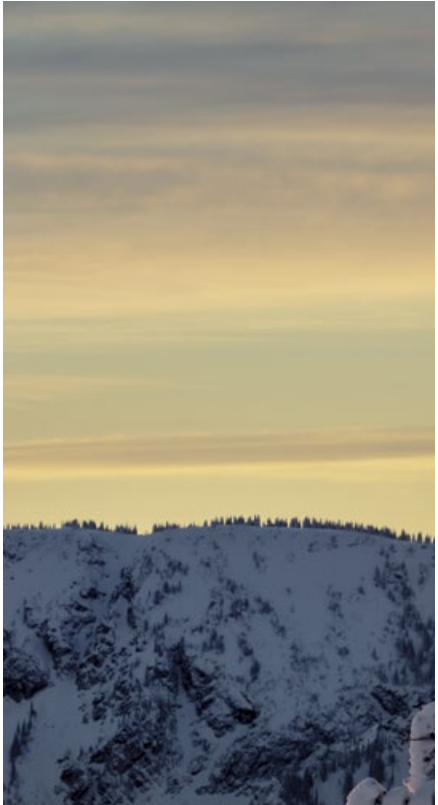

THIS YEAR, GO BIGGER. RIDE FURTHER. FLY HIGHER. CHASE THE THRILL OF THE NEXT RUN. AND THE ONE AFTER THAT. YOU CAN'T FIGHT IT. YOU CAN'T REPLACE IT. THERE'S NO OTHER WAY TO DESCRIBE IT. WE CALL IT:

THAT *ski-doo* FEELING

For advertising purposes, some scenes depicted in this brochure include professional riders and racers executing maneuvers or performances under ideal and/or controlled conditions. Do not attempt any of these or any other risky maneuvers if they're beyond your level of riding ability, as well as your understanding and respect for the performance of your snowmobile. Always ride responsibly and safely. Always observe applicable local laws and regulations. Always wear the appropriate protective clothing, including a helmet. And remember, if you're going to drink, please don't ride. Because of its ongoing commitment to product quality and innovation, Bombardier Recreational Products Inc. OUR AMBASSADORS

SKI-DOO 2024

WHAT'S NEW

MXZ X-RS WITH TURBO R

Bottomless power paired with the most agile platform on the trail. 180-HP Rotax 850 E-TEC Turbo R powers the industry's leading trail performer.

FREERIDE

High-capacity capability for riders who dare to rewrite the book of deep snow possibilities. Further refined in 2024 to handle the demands of the most extreme riders.

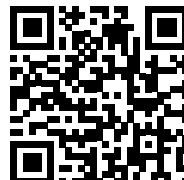

BACKCOUNTRY ON GEN5

Reimagined on the REV Gen5 platform, the 2024 Backcountry offers the most refined combo of trail performance and off-trail capability on snow.

RENEGADE ON GEN5

Built to match every mile of the trail. Rotax 4-stroke power now in the REV Gen5 platform combined with distance-inspired features and performance.

NEW APPAREL & ACCESSORIES

ADVEX HELMET

Lightweight M-Forge technology protection with superior comfort designed for the active rider. The first helmet compatible with the new VIBE Communication System by BRP.

TRAIL GEAR

Protection from the elements with our most advanced trail gear - including flotation assistance. Dial in your comfort with the right amount of insulation. And do it all with superior style and function.

DEEP SNOW GEAR

Ride with confidence with lightweight deep-snow gear that maximizes freedom of movement. The BC Series by Ski-Doo offers best-in-class fit. Durable, breathable shells with inspiring style that keeps you dry and protected in any conditions.

LED RUNNING LIGHTS FOR HANDGUARDS

Fully integrated to vehicle's handguard, it use white, amber and green lights to communicate message to oncoming riders. With these lights in tow, you can alert riders that more vehicles are coming, that you're the last in the group or that a hazardous situation looms.

DEEP SNOW

FREERIDE

The most powerful 2-stroke turbo ever. With 180 horsepower all the way up to 8,000 feet, it leaves all competition behind.

Setting the bar for sending it, the reimagined Freeride produces higher vehicle velocity so riders can charge big hits with ultimate handling and landing capabilities. Welcome to the new standard for extreme deep-snow maneuvers.

**LIVE FREE.
GO BIG.**

**DID YOU
KNOW?**

THE COVER LIDS FROM OUR LINQ DEEP SNOW PRO BAG, LINQ SLIM WATERPROOF TUNNEL BAG AND LINQ DEEP SNOW PRO LIGHTWEIGHT BAG ARE INTERCHANGEABLE.

You may also like

Deep Snow Soft Knee Pads (860202702) Absorb shock better than ever before
Auxiliary LED Light (860202429) Light up the night to ride longer

ACCESSORIES

Add a second level of defense in the deep. Innovative LinQ cargo solutions for extra storage, filters to keep snow from piling up on your sled and bumpers to guard against the elements. That's twice the protection for twice the fun.

860202620</p> |

E LINQ

The E LinQ accessory is now available for deep-snow sleds, and it arrives to make cord management easier. How? By combining your Ski-Doo DESS tether key and your heated accessory plug into one quick and easy magnetic connection. That's more freedom to ride in just one accessory.

TMOTION TECHNOLOGY

Modify your sled's rear suspension to suit your riding preferences with the help of the new tMotion X kit. The pivoting rear arm is designed to make it easier to initiate maneuvers with your Ski-Doo by increasing its agility and nimbleness. So when you lean into a carve, the rear suspension flexes to help your snowmobile to get on edge on a bank or in powder. Snowmobilers that prefer a more rigid ride may try the existing tMotion XT kit.

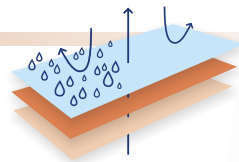

BC ASPECT COLLECTION

LESS IS MORE: 3-LAYER SHELLS TO GO DEEP

The BC Aspect Collection was built by the pros, for the pros to keep you dry in all conditions. Our 3D garment engineers have tested the fit of each item for maximum comfort and mobility. The outcome is sledding apparel so comfortable you'll feel like you have nothing on.

sympatex®

3 LAYER

Comfort like you have never experienced before! 3D fit optimized, coupled with our 3 layer lightweight stretch Sympatex shell so you can ride with full mobility and freedom of movement!

BC ASPECT ONE-PIECE SUIT

Deep days are no match for the lightweight and durable three-layer fabric that majors in keeping snow out. It's waterproof, windproof, everything-proof.

CELEBRATING 20 YEARS OF THE SKI-DOO REV SNOWMOBILE

A little more than 20 years ago, the sport of snowmobiling changed forever. The Ski-Doo REV platform launched for the 2003 model year was so radically different, it changed the rules of snowmobiling in every aspect.

20 YEARS OF REV

ski-doo

It was the largest paradigm shift in snowmobile design the industry had ever seen, and that statement still rings true today. Not only did the 2003 REV change the relationship between rider and machine, but it also spurred the rest of the snowmobile industry into a game of catchup they've been playing ever since.

1997 – Initial Ski-Doo REV Platform Design Phase

The concept of the original REV came from within the walls of BRP (Bombardier at that time), but it was not a corporate mandate to develop a machine that would revolutionize the industry. Two young engineers, Bruno Girouard and Berthold Fecteau, took it upon themselves to begin developing a concept they felt could make riding a snowmobile easier for the rider. But there were challenges and detractors along the way.

Girouard had never rode a snowmobile before, but after his first rides and watching riders on their sleds, his first inclination was that the rider positioning on a traditional snowmobile was all wrong – especially through the bumps. The rider had very little influence over the sled behavior because of the way the weight was so poorly distributed.

The reaction at this radical new concept from their colleagues at Ski-Doo? Not great. In fact, many were against moving forward because they didn't fully understand the benefits that could be realized.

2003 – The REV was Realized

Eventually the doubts eroded into belief and the REV project was catapulted into full development mode. Prototype after prototype were built, analyzed, tested, tweaked and rebuilt again until finally the Ski-Doo product team had achieved the most monumental advancement in the industry.

The entire rider position shift amounted to moving a rider's mass 12 inches forward and one inch higher. Tangible results were instantaneous. Riders such as Blair Morgan – who began using a stand-up riding style before the REV – immediately became nearly unbeatable on the track, thanks to this new riding position.

Those 13 combined inches launched the Ski-Doo brand lightyears ahead of the competition, and into the industry leadership position the brand still maintains today. But the REVolution was just getting started.

2008 – Introduction of the REV XP Platform

Having a target on your back is never easy, and Ski-Doo product development team knew the competition had their sights firmly fixed on the REV. Sitting still was not an option. As others quickly shifted to their own interpretation of this new rider-forward position, the Ski-Doo team was already at work evolving the REV platform.

In 2008, the REV XP platform was announced and with it came an astonishing 50 lb. weight reduction and improved rider ergonomics. The driven pulley was moved forward and up allowing riders even more freedom of movement to influence the snowmobile.

2013 – The REV XS and XM Mark a Turning Point in Snowmobile Design

The REV XS platform unveiled for model year 2013 was as much a cosmetic refinement as it was a further step in advancing rider ergonomics.

2013 was also an important demarcation point in Ski-Doo history for deep-snow snowmobiles. It was the first year of the REV XM platform, a deviation from simply stretching a trail platform to fit longer tracks, as had been the industry norm.

This recognition that deep-snow and trail snowmobiles needed their own platforms with individual features to better suit the evolving needs of riders in each market segment set in motion further chassis developments that would again send Ski-Doo further ahead of the pack.

2017 – The REV Gen4 Redefines the Riding Experience

Almost immediately after the launch of the REV XS and XM platforms, the Ski-Doo product team got to work on another industry-changing innovation. The internal code name of this next snowmobile evolution was, project "ICE," which stood for Incredible Customer Experience.

Just as the original REV platform had done nearly 15 years prior, every inch of the Ski-Doo REV Gen4 platform redefined the relationship between rider and machine.

The new REV Gen4 platform was also accompanied by a game changing new power plant: The Rotax 850 E-TEC engine introduced new technologies that increased performance and reliability and instantly put the rest of the industry back into catch up mode. It also enabled what would become one of a

deep snow riders favorite features – SHOT starting. The benefits of electric start without the extra weight. And leaving no stone unturned, the frictionless pDrive clutch was introduced to create even better throttle response.

And the most discerning minds in the industry speculated the layout of this new platform and the reconfiguring of the entire engine package would enable the Ski-Doo development team to take snowmobiling to places it had never been before. In 2020, that speculation came to fruition with the announcement of the late-release 2020 Ski-Doo Summit 850 E-TEC Turbo – the world's first factory-produced 2-stroke turbocharged engine. The game was officially changed yet again.

2023 – REV Gen5 Creates a New Level of Refinement

Twenty years goes by in a flash. That Incredible Customer Experience the REV Gen4 platform brought to life has been taken to the next level in 2023 with the REV Gen5 platform. It takes what is loved from the previous platform and makes it even better.

While many of the changes from Gen4 to Gen5 trail sleds are visual – freshly sculpted side panels slimmed for better rider sight lines, LED headlights and an available 10.25-inch color touchscreen display.

The REV Gen5 deep-snow platform continued the transformation with more segment-specific design. Being early three inches narrower makes it easier to lean further into sidehills and squeeze through technical tree lines.

And 20 years later, it's obvious this latest REV Gen5 platform is not the end. If the continued success of the REV snowmobile platform and its various generations can teach anything, it's that Ski-Doo innovation never stops.

While the Ski-Doo REV Gen5 platform is the latest advancement in snowmobile platforms and technology, it's only a steppingstone towards the next remarkable, industry-shaping innovation.

YOU'RE NEXT, KID!

KEEP THE TRADITION ALIVE

Your family can now go all-in on riding: our Ski-Doo mini sleds are for kids! Built with children and teens in mind, you no longer have to leave the little ones behind. It's time to pass your passion down to the next generation.

THE MXZ GENERATION

The riders of the future have arrived, and the MXZ 120 and MXZ 200 are built just for them.

Heated grips come standard on these kids' models so their little hands stay warm and a little cold doesn't derail a day of fun. A reliable 4-stroke engine provides the perfect amount of power for those just getting started. And a safety tether cord puts parents' minds at ease.

The next trail tamers and powder shredders are hitting the snow, and these are the sleds for them!

ACCESSORY COLLECTION

The kids have a few new toys to play with! We have a complete lineup of accessories for mini sleds to make their first rides more enjoyable.
